Result for : Movies: CinemaCity

#	Image of the movie	Name of the movie	Main character name	Rating	Price/ticket	Type	Option
1		XXX	XXX	2	100	VIP	Buy
2		XXX	XXX	1	70	REGULAR	Buy
3		XXX	XXX	5	70	REGULAR	Buy
2		XXX	XXX	5	100	VIP	Buy

1 - Create a table with **Bootstrap.**
   a) Add an image of the movie in the column" Image of the movie", the size should fit in the grid.
   b) Add a name in the "Main character name" column, the name of the main character should be a link, choose a different link of your choice for each row, the link should be opened in a **new browser.**

2 - For each row, if the rating of the column "Rating" is equal to 1, then all the background of the row should be red and if the rating is equal or bigger than 3 then the color of the background line will be green.

3 - If the user clicks on buy then he will see another table with the form below and button "Send".
a -You have to choose the design and colors (HTML AND CSS)
        Use your imagination to make it pretty, you have to choose at least 5 properties in CSS.
        Use elements/components of bootstrap.
b - In "total", you have to calculate the amount of the total price, which is price of - ticket * number of tickets.
The **default** amount of tickets should be 1, in case the user wants to change it he should be able to change.
The **maximum** number of tickets that a user can buy is 5 tickets, the price should be calculated automatically for each ticket number input.
c - **The price shouldn't be static!!** If the number of tickets changes in the table, the number in "total " will change automatically.
d - Build a button "Send" in bootstrap.

Name of the store movie	XXX
Price:	X $
Number of ticket:	1
Credit Card number :	xxx xxx xxx xxx
Date of expiration :	xx/xx/xxxx

Total: X$

Send
